

Portable Box-Type Automatic Wrapping Toilet

Wrappon·Green

Next-generation toilet with simple external appearance and superior capabilities

 NIHON SAFETY CO.,LTD.

no water ! no odor ! simple installation !

Portable Box-Type Automatic Wrapping Toilet

Wrappon-Green

This innovative portable toilet based on an entirely new concept wraps and seals in waste and odors without using any water. Operation is clean and sanitary because waste is wrapped after each use. During an emergency, this toilet can be powered using a dedicated battery or the cigarette lighter socket of a vehicle. The functionally enhanced automatic wrapping toilet Wrappon Green can be used in any situation—during everyday life or emergencies. A clean and safe toilet environment is crucial! Let us show you how the Wrappon can help you.

Features

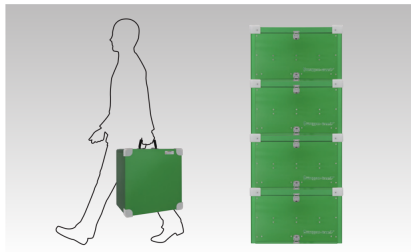

Automatic wrapping mechanism

The automatic wrapping system developed by Nihon Safety uses thermocompression bonding to hermetically seal waste after each use*1 without the use of water. Since waste is individually wrapped and the soiled film is cut away after each use, the Wrappon Green remains clean and is easy to maintain.

Special film prevents odor leakage

The special five-layer film prevents odors from escaping. In addition, because the film is made of polyethylene, it emits no harmful gases when incinerated. Thus, the wrapped and sealed bags can be disposed of in the same way as disposable diapers.*2

Lightweight, compact, and portable

The main unit is composed of an aluminum alloy that does not rust easily even if scratched, and is therefore easy to maintain. The Wrappon Green is lightweight and portable. It also folds into a compact shape when not in use.

Ease of use

1. Adding the special coagulant

Simply pour in the special coagulant and the toilet is ready to use. The special substance is used to absorb the moisture and coagulate the feces/urine.

2. Pressing the remote control button

When finished, press the button on the remote control unit. The Wrappon Green automatically starts wrapping the waste. Because the special film is automatically supplied, it keeps the toilet clean for each use without leaving any waste or odor inside the toilet.

3. Removing the wrapped waste

The operation completion sound (three beeps-Pi-Pi-Pi) indicates that the sealed bag has been separated and released. Pull out the bottom tray and remove the wrapped waste.

*1 Wrapped and sealed film bags should be disposed of in a timely manner, as odors may escape if the packs are stored for an extended period of time.

*2 Because required disposal methods may vary among individual local municipalities, please check with your local public authorities.

● **Wrappon Green**

Model No.	GRSE0001UH
Dimensions	External dimensions (when stored) : 17 11/32"W × 18 1/8"D × 10 5/8"H
	Seat width : 17 11/32"
	Height to the seat surface (when installed) : 17 7/16"
Mass	Main unit : Approximately 26.5lbs , AC adapter : Approximately 2.2lbs
Materials	Frame and legs : Aluminum , Toilet seat and Wrapper : Polypropylene resin
Power supply	AC 110V (AC adapter used) or DC12V
Power consumption	120W or less during operation and 10W or less in the standby state

● **Wrappon supplies**

Product name	Polymer coagulant
Model No.	COC0P001U
Material	Highly water-absorbing polymer (1box , contains 50 bags)
Product name	Film roll
Model No.	COF150C1U
Material	Odor-sealing polyethylene film with a 5-layer structure (Approximately 50 uses)

Film roll Polymer coagulant

Available on various scenes

- Disaster sites
- Outdoor leisure activities
- Construction sites
(especially for tower cranes)
- Cruisers and Boats
- Preserving nature
- Nursing care
